

Sebastopol Climate Action Committee Climate Justice & Equity Principles, Checklist, and Resources

Projects, programs, and policies proposed by the Sebastopol Climate Action Committee (SCAC) will be screened through the following set of principles (adapted from the Petaluma Climate Emergency Framework “Values and Considerations”):

1. Acknowledging local indigenous peoples and communities. We acknowledge that for thousands of years southern Pomo and Coast Miwok people lived in the Sebastopol area. We will cultivate respectful and collaborative relationships with local indigenous communities with the intention to understand, highlight, and integrate their community needs, climate action priorities, and ecological insight and values into our climate actions.
2. Advancing equity. We affirm that the benefits and burdens of addressing the climate crisis must be shared equitably. Those least capable of bearing the burdens should not be expected to pay the same costs as those more able to absorb the burden. There is a moral imperative in prioritizing climate-related actions and policies that promote social, racial, environmental, economic, disability, and public health justice in communities disproportionately impacted by climate change. Historically underserved communities are already experiencing a disproportionately higher impact from climate disruptions and have fewer resources available with which to address those impacted. Integration of these communities’ feedback and participation in Sebastopol’s climate action programs is crucial.
3. Catalyzing robust and meaningful public participation, inclusion, access, diversity, and collaboration. A community thrives when all members benefit from actions and policies that increase awareness, education, collaboration, and engagement.
4. Ensuring accountability, transparency, responsibility. Sebastopol must explain clearly why it is taking action on the climate issue, what those actions involve, timelines for when they will take place, and how they will demonstrate the City’s commitment to addressing its piece of the climate crisis. In order to be good stewards of the environment and to ensure the prosperity of future generations, the City must set an example, by acting responsibly to its neighbors, the global community, and all species by eliminating reliance on resources and products that exacerbate the crisis both within and outside Sebastopol city limits.

5. Acting with urgency and integrity. Climate inaction has a compounding effect. The longer emission sources continue unabated, the greater the amount of reduction within a shorter time frame is required to offset the increases. Swift action that is rooted in integrity is necessary to ensure that City actions and policies contribute to improved climate justice, mitigation, sequestration, adaptation, public health, and social resilience outcomes and meet our mandates and targets.
6. Creating ecosystem protection and social resilience and together. Holistic thinking can identify synergies that would be overlooked when examining individual systems or policies. For this reason, preference should be given to actions and policies with multiple benefits that align sustainable economies with thriving ecologies, including sustainable economic benefits, reduction of pollutants and toxics, restoration of ecosystems, and improvements in public health, community cohesion, and wellbeing.
7. Funding accessible and effective action. Sustainable, progressive funding sources must be developed to fund climate-smart measures that also help meet the needs of vulnerable communities. Some actions will pay for themselves, but many may result in new costs or may require upfront funding which vulnerable communities may not be able to afford. For action to be effective, to the extent the information is available, decision-makers, including the City Council and individual households, need the information to evaluate and balance the cost of implementation with potential cost savings and the avoided costs of inaction.
8. Working collectively with leading regional, statewide, and international bodies. Sebastopol is a small city. It must do what it can to leverage external resources. Sebastopol can learn and borrow from the successes and failures of other cities and jurisdictions in addressing the myriad challenges and impacts of climate change so that cross-jurisdictional coordination regarding climate action can magnify the effectiveness of the City's efforts.

Climate Justice & Equity Checklist
DISCUSSION DRAFT**

Use the following checklist for each project, program, or policy being considered by the SCAC.

1. Has the indigenous community been consulted regarding any concerns they might have about the project, program, or policy? If so, have their concerns been addressed?
2. Have representatives of the homeless community been consulted regarding any concerns they might have about the project, program, or policy? If so, have their concerns been addressed?
3. Have representatives of the labor community been consulted regarding any concerns they might have about the project, program, or policy? If so, have their concerns been addressed?
4. Have representatives of the LatinX community been consulted regarding any concerns they might have about the project, program, or policy? If so, have their concerns been addressed?
5. If the policy or program has fiscal implications, is it regressive in nature?
6. Is the project, program, or policy located in or designed to serve a predominantly minority or low-income neighborhood?
7. Are there other vulnerable communities that might be affected by the project, program, or policy? If so, have their concerns been addressed?
8. *...plus other considerations....??*
